TIMELESS GLASS 4MM, 5MM, 6MM

Timeless glass is called self-cleaning glass due to its properties. Limescale and dirt do not stick to the glass. Water flows down faster, which also prevents the formation of streaks, making it easier to clean.

The glass is permanently protected against corrosion and as a result it does not change its colour and retains its attractive appearance. Water vapour evaporates much faster compared to standard glass.

SAFETY GLASS

SAFETY
GLASS

Thermal-toughening increases its resistance to impacts and strength not only to mechanical factors but also to stresses related to surface temperature changes.

The mechanical strength of toughened glass is 5 - 7 times higher than ordinary glass.

CONFIGURATION

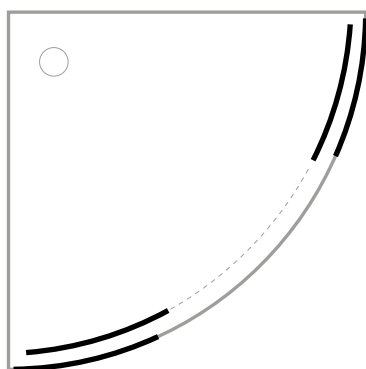

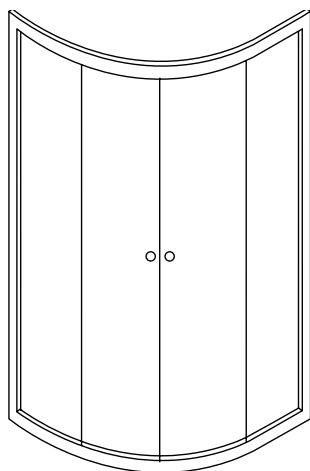

Authorised software UBM makes it possible to adjust the enclosure to the interior of every bathroom. The personalised enclosure creates a non-standard dimension, 11 glass variants, a wide range of accessories. The online configurator is available at the premises of UBM Partner Showrooms. The list of Partners is available from
